EDUCATION

De La Salle University–Dasmariñas (DLSU-D) 2021 – 2025

Bachelor of Science in Computer Science (BS CS)

Relevant coursework: Distributed Systems, Algorithms & Complexities, Software Engineering, Database Management Systems, Human-Computer Interaction (HCI), Object-Oriented Programming.

EXPERIENCE

ROC.PH Digital Marketing Services (roc.ph) General Trias, Cavite, Philippines

UI/UX & Frontend Engineer Intern June 2024 – August 2024

- Designed responsive web and mobile screens in Figma, following established usability guidelines and a shared design system.
- Built those designs into accessible HTML, CSS, Tailwind and React for live client websites.
- Worked in agile sprints with daily standups, design reviews, Git and quick rounds of client feedback.

PROJECTS

Manas: Ciel Solo Project

Voice AI Assistant 2026

- Built a desktop voice assistant that answers aloud in Japanese and English, searches the web, and reads and writes Obsidian notes (Python, Groq Whisper, Edge-TTS).
- Cut the typical wait before it starts speaking from 4.6 s to 1.4 s by speaking each sentence as soon as it is written.

LSFM AI HQ Solo Project

Multi-Agent Discord Team 2025 – Present

- Built a five-agent Discord team that sorts email, tailors resumes to each job, reviews designs and checks code; job applications wait for approval before anything is sent.
- Gave each agent cloud AI with a backup provider or a local model for private work, plus hybrid search over project notes (Python, Groq, Gemini, Ollama).

Patriot BS Computer Science Capstone

University Matchmaking Mobile App 2023 – 2024

- Led the build of a mobile app that matches university students by shared interests (React Native, TypeScript).
- Connected it to an AWS backend (Lambda, DynamoDB, Cognito) with Redis caching for fast sessions.

Cognitive Memory Core Solo Project

Memory for AI Coding Assistants 2025

- Built a memory that saves each coding-assistant mistake as a lesson and shows the relevant ones before the next task, so the same error is less likely to repeat.
- Turned recurring lessons into standing rules; written in plain Python with no dependencies.

SKILLS

AI & LLM: Multi-Agent Systems, Tool & Function Calling, Structured JSON Output, Hybrid RAG (Embeddings + BM25), Cloud LLM APIs (Groq, Google Gemini), Local LLMs (Ollama), Voice Pipelines (Whisper Speech-to-Text, Edge-TTS, FFmpeg), Web Search Tools

Languages & Backend: Python 3.11 (asyncio), TypeScript, JavaScript, Node.js, Express, aiohttp, REST APIs, WebSocket, OAuth2, Headless Browser Automation, Git / GitHub

Frontend & Design: React, React Native, HTML, CSS (Custom Properties, Design Tokens), Tailwind CSS, Web Audio API, Canvas 2D, Responsive Design, Figma (Auto Layout, Components, Variants), Wireframing, Information Architecture, WCAG 2.1 Accessibility, Usability Testing

Cloud & Data: AWS (Lambda, DynamoDB, Cognito), Redis, SQLite, Vercel
